A report of activities of the Atlanta Research Data Center

Cornucopia of Research

At Federal Statistical Research Data Centers (FSRDCs), researchers use restricted-access microdata to address important research questions. An Excel spreadsheet containing metadata about active and completed projects, including project title, abstract, FSRDC location, principal investigator, year project started, researchers, and datasets requested in project proposals is available for download [here](#).

Currently metadata is only provided for projects that solely use Census Bureau datasets. Project information will be updated quarterly.

Schedule Virtual Information Seminar for Your University

The Atlanta RDC Administrator is available for virtual presentations to help spread the word about research possibilities using non-public data in the FSRDC Research Network. Whether your university is currently a member of the ARDC Consortium or if you want to build support among your colleagues to lobby to become Consortium members, contact [Melissa Banzhaf](#) to discuss scheduling a virtual informational seminar. She is happy to conduct seminars to a department-only or university-wide audience.
